

PATENT
514425-3596IN THE CLAIMS:

Please add the following new claim:

B1 --5. A toner for developing an electrostatically charged image of a heat roller copier or printer, said toner consisting essentially of a binder resin, a colorant and a charge control agent, wherein said binder resin at least includes 1 to 100 parts by weight of a polyolefin resin having a cyclic structure and 0 to 99 parts by weight of at least one resin selected from polyester resins, epoxy resins, polyolefin resins, vinyl acetate resins, vinyl acetate copolymer resins, styrene-acrylate resins, and other acrylate resins, the cyclic structure of the polyolefin resin has at least one functional group selected from a carboxyl group, a hydroxyl group and an amino group and is crosslinked by metal ions or dienes, a polyolefin resin of a cyclic structure having an intrinsic viscosity (i.v.) of 0.25 dl/g or more, a heat distortion temperature (HDT) by DIN53461-B of 70°C or higher, and a number average molecular weight of 7,500 or more and a weight average molecular weight of 15,000 or more, as measured by GPC, is contained in a proportion of less than 50% by weight based on the entire binder resin.
